

NOISE IS OUT....SILENCE IS IN

COMICE SILVER INTERCONNECT

There is only one
part of your car audio
system that you want to
be silent... make it happen
with Pear Audio Cables

HIGH FIDELITY CAR AUDIO

“Audiophile-grade” cable for car audio

COMICE SILVER

Pure Silver Signal Conductors -

99.99% pure silver, annealed to prevent micro-cracking, for “audiophile-grade” signal transfer. Don't settle for sound degrading silver-plated copper. Insist on pure silver for the ultimate in sonic clarity and accuracy.

Triple Noise Reduction with TRIBODeath™ -

Three levels of noise reduction including the world's first car audio cable to have TRIBODeath™ triboelectric noise killer.

- TRIBODeath™ conductive polymer layer dramatically reduces the amount of triboelectric noise created. Pear Cable is the world's first company to bring this technology to car audio cables. Triboelectric charges are created when vibration causes two different materials to rub against each other in a cable. TRIBODeath™ virtually eliminates this noise caused by vehicle vibration for a cleaner sound and lower overall noise floor.

- Twisted Pair conductors help prevent EMI noise from getting into your sound system. EMI is generated in your car as current travels through the chassis of the vehicle. Twisted pair conductors are essential for eliminating alternator whine.

- Spiral Served Shield. Radio Frequency Interference (RFI) rejection is accomplished with a silver plated spiral served shield, grounded at one end only. The metallic shield acting in conjunction with the TRIBODeath™ layer offers 100% RFI coverage.

Teflon^(R) Air Tubes -

Teflon^(R) air tubes are twisted with the Teflon^(R) insulated wires to lower the capacitance of the cable. A technique generally reserved for high fidelity home audio cables, Comice Silver Interconnects elevate car audio cables to a new standard. Hear all the punch you desire without the fatigue.

Bring your car stereo up to audiophile quality with the Comice Silver Interconnect.
